

# Magnetische Filtersysteme und Separatoren

## Spreizmagnete

Die Wirkungsweise der Blechspreiz-Magnete beruht auf dem Prinzip, dass gleichnamige Magnetpole sich abstoßen. Seitlich an den Blechstapel angesetzt erzeugen Blechspreiz-Magnete eine gleiche magnetische Induktion in den übereinander liegenden Blechen, so dass diese auffächern und vereinzelt werden. Blechspreiz-Magnete sind geschlossene Systeme, in denen hochwertige Ferrit-Magnete oder Neodyme eingesetzt sind. Diese Werkstoffe garantieren ein konstantes Magnetfeld über viele Jahre.
